Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application.

LISTING OF CLAIMS:

 (Currently Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a browser of a client computer system, comprising:

receiving, at an auxiliary server, a request from client browser for a main program after the client browser has obtained an item document of a particular seller from an auction site; and delivering the main program to the requesting client browser,

the main program being configured to receive, from the client browser. [seller specific] information sufficent to select the particular seller, and to load and activate one or more modules including a picture displaying module for displaying selectable images, the picture displaying module being configured

to obtain a set of selectable images of the selected seller's auction items[,] based on the received seller specific information,

to moveably display, on the client browser, a set of selectable images, showing the selected seller's auction items, and

to receive a user selection of a selectable image being displayed and to redirect the client browser to an auction item document at an auction site associated with the selected image; and

sending the set of selectable images, based on the received seller specific information, to the browser.

- 2. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1, wherein the step of receiving a request from a client browser for a main program includes receiving the request from an auction item document obtained from an auction site.
- 3. (Currently Amended) A method of delivering, in the form of selectable images, a plurality of

auction items of a selected seller to a client browser as recited in claim 1, wherein the set of [pictures]selectable images is displayed on the auction item document obtained from the auction site.

4. (Currently Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1,

wherein the picture displaying module is configured to moveably display the set of [pictures]selectable images at a controllable speed; and

wherein the controllable speed is controlled by a current position of a pointing device connected to the client computer system.

5. (Currently Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1,

wherein the client computer system includes a display output device and the client browser occupies a graphical window on display output device; and

wherein the picture displaying module is configured to moveably display the set of [pictures]selectable images horizontally in the client browser graphical window.

- 6. (Currently Amended) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 1, wherein the main program is configured to load and activate a categories module that maintains a set of categories available on the auction site from the specified seller, <u>said categories module initially obtaining the set of categories of the specified seller from the auction site and thereafter obtaining the set of categories from the auxiliary server.</u>
- 7. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 6, wherein the set of categories available on the auction site from the specified seller is stored on the auxiliary server.
- 8. (Previously presented) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 6, wherein the main

program is configured to load and activate an item links module that maintains a set of item links for each category in the set of categories available on the auction site from the specified seller

- 9. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 8, wherein the set of item links available on the auction site from the specified seller is stored on the auxiliary server.
- 10. (Original) A method of delivering, in the form of selectable images, a plurality of auction items of a selected seller to a client browser as recited in claim 9, wherein the set of item links includes an item name associated with each item link.
